SURVEY KEY FINDINGS

One Identity Research Exposes Major Problem with Employees Snooping on the Corporate Network

October 17, 2017

Goals and Methodology

Research Goal

The primary research goal was to understand current experiences and challenges around Identity Access Management (IAM) and privileged accounts.

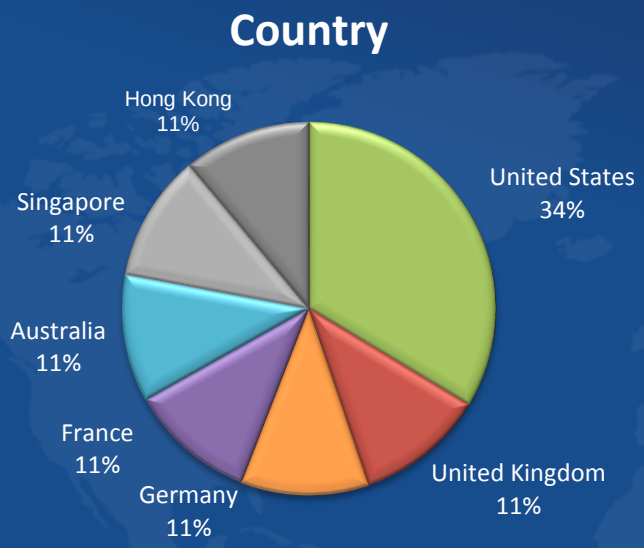
Methodology

An online survey was fielded to independent databases of IT professionals with responsibility for security. A wide variety of questions were asked about experiences and challenges with IAM.

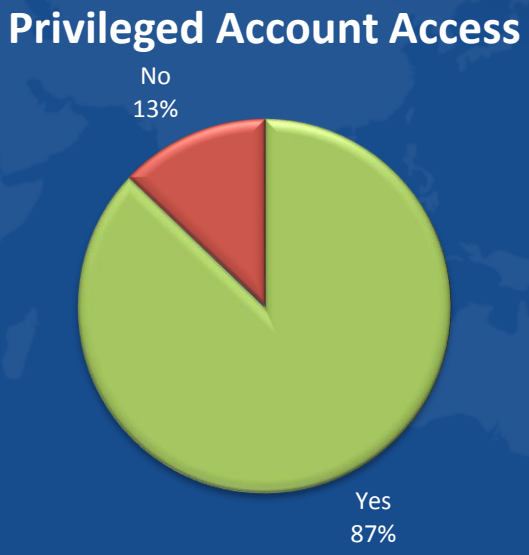
Participants

A total of 913 individuals completed the survey. All had responsibility for IT security as a major part of their job and were very knowledgeable about IAM and privileged accounts.

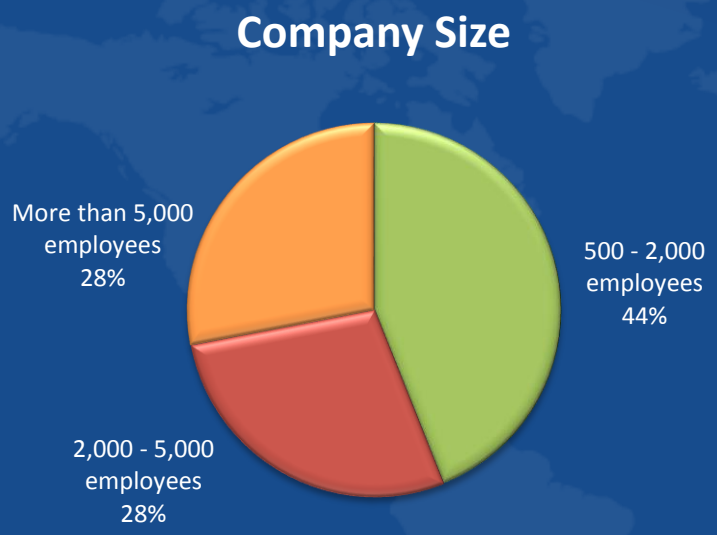
Individuals Represented

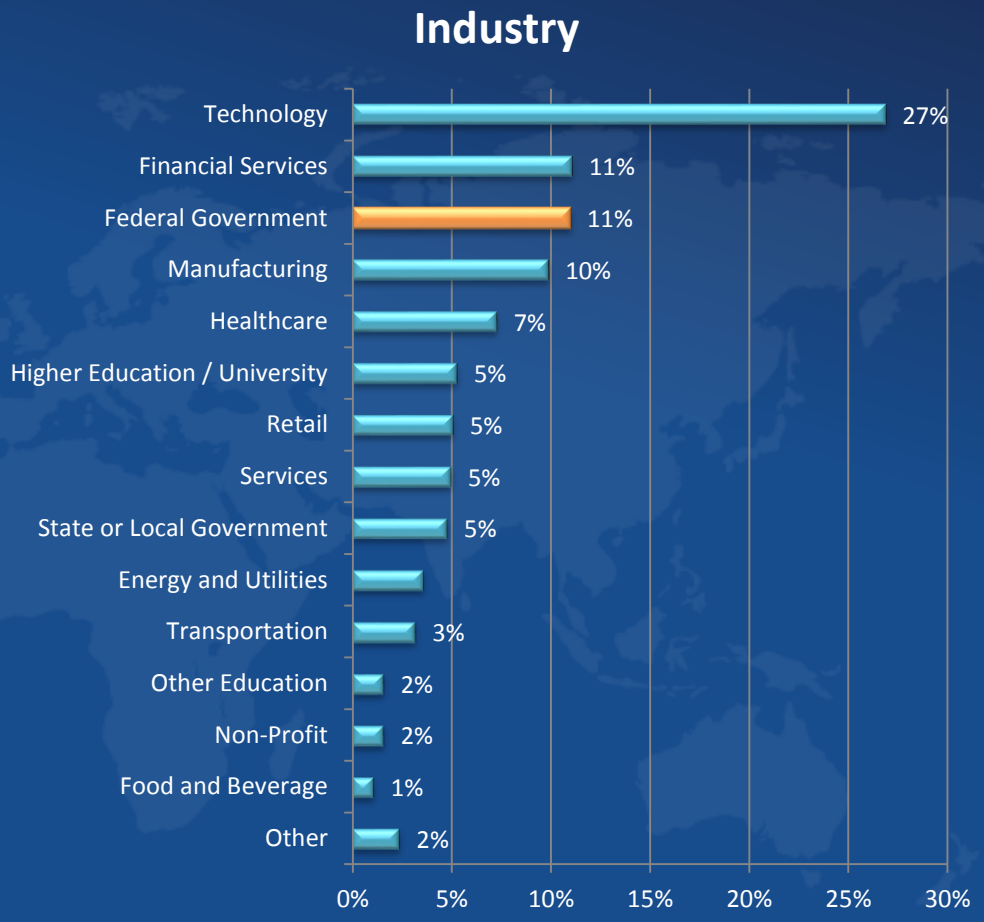


Individuals Represented (con't)



Companies Represented





92% say employees attempt to access information they don't need

In your experience, do EMPLOYEES ever attempt to access information that is not necessary for their day-to-day work?
