Benefits

- Deploy an identity-centric Zero Trust model
- Govern access to on-premises, cloud and hybrid resources from request through fulfillment for users and data
- Reduce risk by ensuring users have only the access they need
- Satisfy audit and compliance initiatives with attestation/recertification policies
- Put access decisions where they belong — in the hands of the business
- Build on existing investments and infrastructure and grow from there

Overview

Traditional identity and access management (IAM) frameworks are expensive to build and time-consuming to implement and maintain. They are burdens on most IT departments as IT typically handles all user identity lifecycle management. To meet the varied IAM needs of different business units, IT often works with a siloed set of narrowly focused tools and security policies and relies on manual processes for enforcement. This leaves the environment vulnerable and increases risk, and makes it difficult to meet SLAs.

You can increase productivity by giving users access to the data and applications they need to do their jobs—and nothing more.

Identity Manager governs and secures your organization’s data and users, meets uptime requirements, reduces risk and satisfies compliance by giving users access to data and applications they need - and only what they need - whether on-premises, hybrid or in the cloud. Now, identity and access management (IAM) can be driven by business needs, not by IT capabilities. With Identity Manager, you can unify security policies and satisfy governance needs — today and long into the future.

You can do this while improving business agility today and in the future with a modular and scalable IAM solution.

MITIGATE RISK.
CONTROL ACCESS.
GOVERN IDENTITIES.
SECURE DATA.

Now, identity and access management (IAM) can finally be driven by business needs.

Features

**Identity Lifecycle**
Identity management software that secures user access and automates enterprise provisioning to any target on-premises or in the cloud.

**SAP Certified**
Provide certified deep-SAP-integration with fine-grained capabilities to enhance existing SAP security models — and connect accounts under governance.

**Risk reducer**
Make better security decisions by combining security information and policies from multiple sources to reduce exposure and eliminate information silos.

**Cloud**
Extend investment in identity governance beyond on-premises applications to hybrid and SaaS applications with an add-on, cloud-based, managed-service offering.

**Governance**
Single platform for governance for visibility to who has access to data and applications, when that access was granted and why. Provide auditors with detailed, real-time governance reports that include information about what resources are in your environment, who has access to them, when and why that access was granted and terminated.

**Access done right**
Enhance security by providing employees, contractors, partners, customers, students, alumni, constituents and patients with only the access they absolutely need - nothing more and nothing less.

**Compliance**
External regulations? No problem. Internal policies? No problem. Get the complete visibility you need while meeting the demands of all the other groups.

Data Governance
Get control of and visibility to your data.

Self-service access portal
Enable the business to save time and help themselves. Reduces IT effort via a customizable online intuitive “shopping cart” portal. This enables users to request access to security assets such as physical assets, groups and distribution lists and control access rights and permissions for their entire identity lifecycle with predefined approval processes and workflows.

Privileged Access Governance
Unify governance where users can request, provision and attest to privileged and general user access within the same console.

Attestation
Empower line of business personnel to approve or deny user and group access and entitlements. Display the status of group and disti list in a clear dashboard view. Schedule on-demand or routine attestation and display the status of group or distribution list in a clear, concise dashboard view; and enables you to produce detailed reports for discovery, as well as to satisfy compliance.

Connectors
Extend identity governance capabilities to the cloud and reduce cloud application onboarding time.

Application Governance
Streamline application-access decisions and enable line-of-business managers to make decisions without IT input.

Common Criteria Certified
Common Criteria certified against the NIAP-approved Protection Profile for Enterprise Security Management – Identity and Credential Management v2.1

About One Identity
One Identity delivers unified identity security solutions that help customers strengthen their overall cybersecurity posture and protect the people, applications and data essential to business. Our Unified Identity Security Platform brings together best-in-class Identity Governance and Administration (IGA), Identity and Access Management (IAM), Privileged Access Management (PAM) and Active Directory Management and Security (ADMS) capabilities to enable organizations to shift from a fragmented to a holistic approach to identity security. One Identity is trusted and proven on a global scale – managing more than 250 million identities for more than 5,000 organizations worldwide. For more information, visit www.oneidentity.com.
