Challenges

- To secure customer data
- Developing identities-centric strategy across multiple channels

Results

- A diverse portfolio of security technologies and services
- Advanced solutions for cloud and data center security
- Expertise in Privileged Access Management

Products

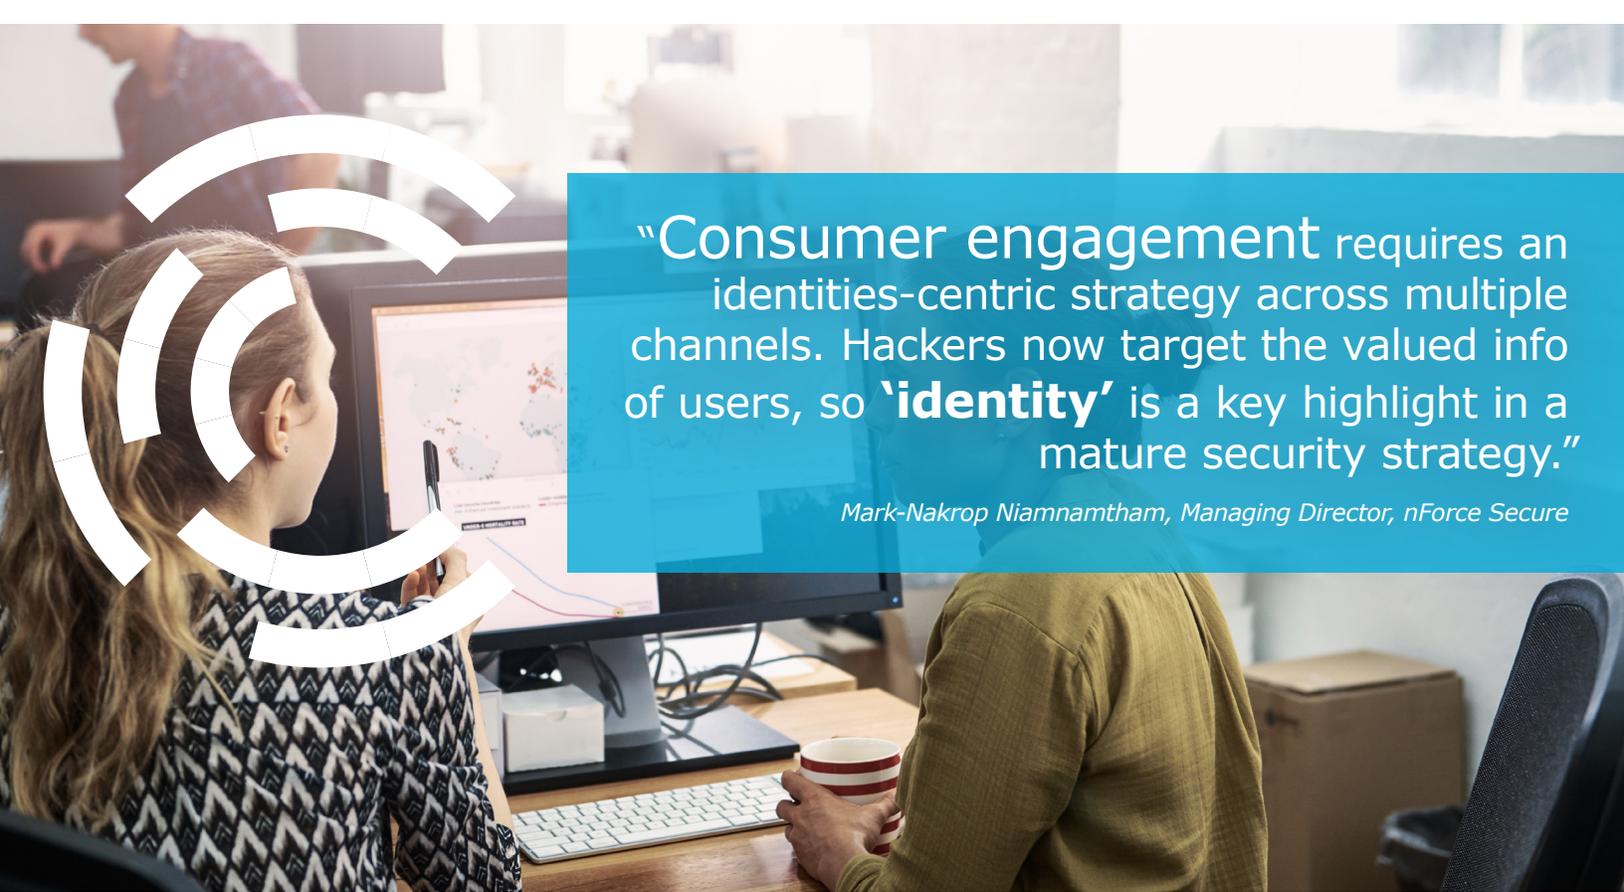

- One Identity Privilege Access Management Solutions

In the battle to combat hackers, the right partner is key

nForce Secure protects customers privilege accounts with expertise and confidence

Every day the news hits: another company has had its data compromised, hackers have gotten their hands on valuable customer data, organizations lose money, and their reputations suffer irreparable harm.

These security issues are precisely the concern and the expertise of nForce Secure, one of the leading value-added distributors of IT security, information management, and network solutions for Thailand. nForce has been in business for more than 10 years and has quickly established themselves as the go-to partner for companies in Thailand seeking to ensure that their security stance is as safe, efficacious, and pragmatic as possible.

“Consumer engagement requires an identities-centric strategy across multiple channels. Hackers now target the valued info of users, so **‘identity’** is a key highlight in a mature security strategy.”

Mark-Nakrop Niamnamtham, Managing Director, nForce Secure

“nForce offers a diverse portfolio of security technologies and services,” said Mark-Nakrop Niamnamtham, Managing Director of nForce. “For customers throughout Thailand we deliver advanced solutions for cloud and data center security, network security, advanced threat detection, data security, enterprise modernization, data analytics, and converting big data into security intelligence.”

An area of particular expertise for nForce is in helping customers address their Privilege Access Management (PAM) challenges. To do that, nForce has developed a solid, long-term partnership with One Identity, whose PAM solutions provide the ideal mix of control, visibility, accountability, and risk mitigation to render attacks ineffective.

“It’s more critical than ever to secure users, identities and your

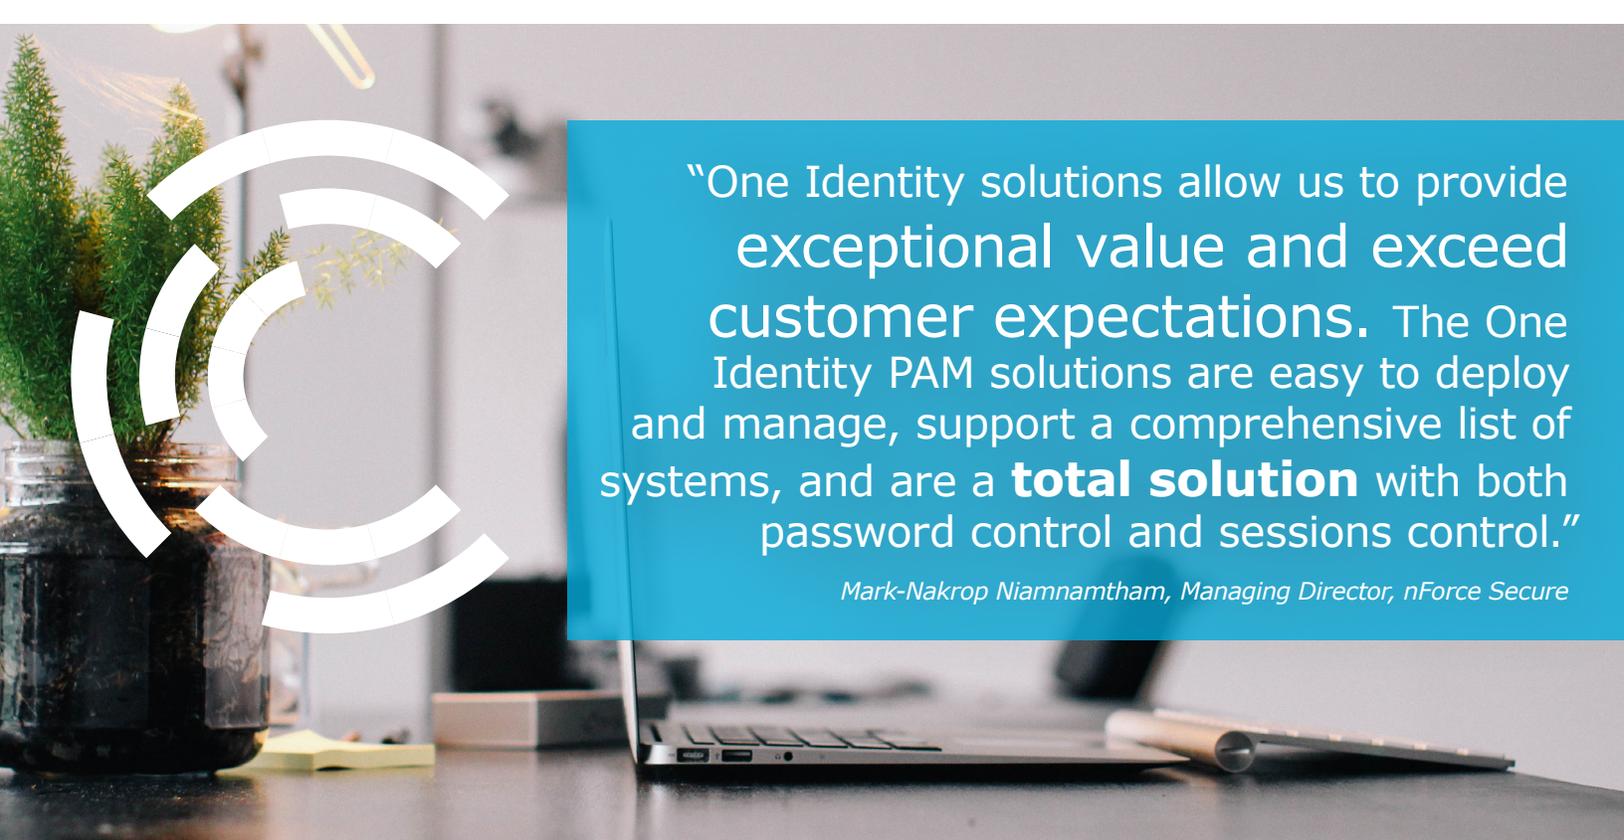

customers’ data than in the past due to the fact it’s in the age of technology,” notes Niamnamtham. “Consumer engagement requires an identities-centric strategy across multiple channels. Hackers now target the valued info of users, so ‘identity’ is a key highlight in a mature security strategy.”

The biggest need and top concern for many of nForce’s customers is finding ways to efficiently and cost-effectively secure and manage access to data and systems without causing headaches or slowing down operations. For example, banks in Thailand are required by federal oversight to be able to control and audit privileged accounts. “But this protection can have the ability to cause critical impact on the systems, such as edit configuration or rebooting the services,” says Niamnamtham. In addition, password management

is also an important issue for nForce’s customers as they deal with HIPPA and NIST compliance.

For over ten years, nForce has consistently recommended and deployed One Identity’s PAM suite, which offers a powerful password vault, optimized for the modern hybrid cloud enterprise. This solution set removes the anonymity so often associated with administrator access and assigns individual accountability and complete visibility into administrator activity. In addition, the One Identity PAM suite includes technologies that empower a least-privileged access model for Unix/Linux root access and Active Directory Admin access.

“One Identity solutions allow us to provide exceptional value and exceed customer expectations. These important

“One Identity solutions allow us to provide exceptional value and exceed customer expectations. The One Identity PAM solutions are easy to deploy and manage, support a comprehensive list of systems, and are a **total solution** with both password control and sessions control.”

Mark-Nakrop Niamnamtham, Managing Director, nForce Secure

PAM solutions allows us to establish a consultative approach that often leads to long-term, mutually beneficial relationships,” says Niamnamtham. “The One Identity PAM solutions are easy to deploy and manage, support a comprehensive list of systems, and are a total solution with both password control and sessions control. In addition, the UIs are friendly and easy to understand.”

The breadth of nForce’s expertise and the solidity of One Identity’s PAM solutions means that regardless of nForce’s customer’s IAM maturity, sophistication, or budget, they are able to tailor the perfect solution for the customer.

“We seek to provide a total solution for Identity Management that covers all our customers’ requirements,” says Niamnamtham. “Our expertise and longevity with the One Identity PAM products means we offer an all-in-solution which meet the customers’ expectation.”

About One Identity

The One Identity family of identity and access management (IAM) solutions, offers IAM for the real world including business-centric, modular and integrated, and future-ready solutions for identity governance, access management, and privileged management.
