Overview

If you are like most organizations, your IT infrastructure has changed significantly in recent years. Some businesses have made the move to cloud-only while others have requirements to remain on-premises only. However, the majority of organizations deploy a hybrid model managing some on-premises infrastructure and some cloud, plus a number of software-as-a-service (SaaS) applications. So, a hybrid environment is the new normal, which means you need tools that can enhance your organization’s agility and address changing IAM challenges.

Delivering even more value to your on-prem investment

The One Identity Hybrid Subscription expands the functionality of One Identity on-premises products by unlocking new hybrid capabilities. The subscription enables you to ‘join’ your One Identity on-prem solutions to our One Identity Starling software-as-a-service platform. This gives your organization immediate access to cloud-delivered features and services. No messy installs or infrastructure deployments needed. With One Identity Hybrid Subscription, you always have access to the newest cloud-delivered features.

One Identity’s modular and integrated portfolio of on-premises, cloud and hybrid IAM solutions enables you to start anywhere and build from there.

Features
A set of subscription features are available today and will be followed by additional products and functionality. A single subscription can be used for all One Identity products.

Unlimited Starling Two-Factor Authentication
Lock down administrator and user access with multi-factor authentication as a service. It solves the password problem to secure your organization and keep your users productive.

Benefits for One Identity on-prem solutions:
- Heightens security for virtually any system or application
- Accelerates password-reset process that reduces risk of social engineering
- Flexible, simple-to-use authentication options, such as:
  - SMS texts
  - Phone calls
  - Push-to-authenticate - mobile-enabled authentication capabilities, including automated texting of codes to admin and user phones
