Benefits

• Full-strength IGA with on-demand delivery
• Govern access to on-premises, cloud and hybrid resources from request through fulfillment for users and data
• Reduce risk by ensuring users have only the access they need
• Satisfy audit and compliance initiatives with attestation/recertification policies
• Put access decisions where it belongs — in the hands of the business
• Build on existing investments and infrastructure and grow from there

Cloud without Compromise

Traditional identity and access management (IAM) frameworks are expensive to build and time-consuming to implement and maintain. And many are old-school design that are not optimized for the cloud. For IT departments, these legacy IAM frameworks are a massive burden to work with and maintain – especially if IT is responsible for managing all user identity lifecycle management. Often, to meet the varied IAM needs of different business units, IT uses a siloed set of tools and security policies, and manual processes. This combination of archaic practices leaves each business unit – and the organization as a whole – at risk and vulnerable to attacks. Plus, it is inefficient and makes it difficult to meet SLAs. Then, mix in a hybrid environment with resources on-prem and in the cloud and now you’ve added to the burden. Traditional SaaS-based IGA solutions have limited capabilities and are unable to satisfy your IGA needs.

But now finally you can accelerate productivity and give users access to just the data and applications they need to do their jobs – and nothing more – in a SaaS model with no compromises for functionality or scope.

With Identity Manager On Demand, you can unify security policies and satisfy governance needs. And you can do this while improving business agility with a modular and scalable on-demand IAM solution.

MITIGATE RISK. CONTROL ACCESS. GOVERN IDENTITIES. SECURE DATA.

Now, SaaS-delivered identity and access management (IAM) can be driven by business needs thanks to One Identity Manager On Demand.
