One Identity Solutions
Secure what matters most with Unified Identity Platform

Our Perspective
With the proliferation of human and machine identities, the race to the cloud and the rise of remote working, protecting identity has never been more important. The main impediment to securing identities is the fragmented way in which most organizations manage user-access rights.

One Identity brings together the four core elements of identity security – Identity Governance and Administration (IGA), Access Management (AM), Privileged Access Management (PAM), and Active Directory Management (AD Mgmt) – to help customers holistically address this challenge. We call this Unified Identity Platform.

Quick facts
- 80 of the Fortune 100 as customers
- 11,000+ enterprise customers
- 500+ million identities actively managed
- 1,300+ partners worldwide
- 50 enterprise- and consumer-grade products
- 20+ years serving some of the largest and most demanding organizations around the globe

*Categories and rankings based on Fortune 2000

Vertical Expertise
- 10/10 in financial services
- 9/10 in healthcare
- 4/5 in telecom
- 8/10 in aerospace and defense
- 4/5 in energy
- 8/10 in technology
Moving from a fragmented state to a unified approach to identity security delivers numerous operational benefits, such as correlating all identities, removing friction between formerly distinct technologies, and facilitating automation and orchestration.

This model also provides a critical level of added protection. With 360-degree visibility, adaptive security controls, and the ability to apply analytics across all identities in the enterprise, organizations can verify everything before granting access to their most-critical assets. This level of response and control allows cybersecurity executives to shrink windows of exposure, move closer to achieving Zero Trust and improve their overall security posture.

**Unified Identity Platform**

We don’t simply help customers solve all their identity security problems with fragmented point solutions. Our vision is to integrate these technologies into a single, cloud-first platform – what we call our Unified Identity Platform.

The foundation of our platform is in an identity-correlation system that delivers a consistent view across users, machine identities and accounts, which moves your organization from a fragmented to a unified state. Workflow orchestration eliminates manual and error-prone activities; connectors deliver flexibility by bringing disparate applications and security ecosystems under a single point of control. Powering all of this is identity intelligence and analytics to help cybersecurity professionals get a clear view of their risk profile and take corrective actions as needed.
