

DATASHEET

Password Manager On Demand

SaaS-delivery to empower users, reduce support costs and strengthen security

Benefits

- Full-strength password management capabilities with on-demand delivery
- Reduces helpdesk and IT involvement in routine password management
- Dramatically reduces user downtime
- Provides immediate return on investment
- Improves user and IT satisfaction due to ease of use and simple deployment
- Increases network security
- Allows for synchronization of passwords between disparate systems
- Integrates with Defender multifactor authentication for increased security

Overview

Most requests for helpdesk assistance are for password resets. And as organizations strive for stronger security policies, the pain of password management is becoming more pervasive. Requiring more complex passwords that must be changed more frequently increases the likelihood that users will forget them and place a call to support. The problem is magnified as organizations apply passwords to multiple, disparate systems and applications. As a result, many organizations are caught between increasing security and reducing user support costs.

Password Manager On Demand provides a simple, secure, self-service solution that allows end users to reset forgotten passwords and unlock their accounts. It permits administrators to implement stronger password policies while reducing the helpdesk workload. Organizations no longer have to sacrifice security to reduce costs.

Features

Enhance security

Password Manager On Demand enables organizations to adopt more secure data-access policies beyond the control offered natively in Microsoft® Active Directory®. It increases security by eliminating helpdesk errors, reducing the need for users to write down their passwords and making password guessing and break-ins more difficult. Built-in data encryption supports global access while maintaining data security.

User participation secures your return on investment

Password Manager On Demand empowers users to handle the most basic password tasks on their own, allowing you to save your IT budget and realize a fast return on your investment.

Make a smart investment

Password Manager On Demand is a long-term solution to a growing problem. It is a smart investment for any enterprise seeking to increase IT operational efficiency and improve security.

- Cost-effectiveness in using existing Active Directory infrastructure— Password Manager On Demand allows you to get more from your existing Active Directory infrastructure. You can also quickly deploy it and realize

immediate ROI. Plus, it provides a more granular, group-based password policy than Windows Server does.

- Reduced helpdesk workload and cost, and increased user productivity—With Password Manager On Demand, users can reset their own passwords and unlock their own accounts without involving the helpdesk or administrative support.
- On-demand user help—Password Manager On Demand provides online password policy explanations. In addition, it delivers feedback to the users automatically if password setup rules are not met, and can generate compliant passwords for users without helpdesk assistance.
- GINA extensions for the Windows log-on dialog box—To simplify password resets for users, administrators can make the Windows log-on screen display a button for resetting passwords prior to log on. This eliminates the need to configure public kiosks or expensive telephone-based systems.

Enforce organizational standards

Password Manager On Demand accommodates the widest possible range of organizational policies and data security standards.

- Strict policy enforcement—Password Manager On Demand enforces administrator-defined standards, logs unsuccessful authentication attempts, and locks the corresponding accounts if necessary.
- Enforced enrollment—Password Manager On Demand provides several mechanisms that ensure that users enroll and use the software, guaranteeing its effectiveness.
- Reliable authentication—The personal Q&A profiles for users contain questions with unique answers that are easy for users to remember but hard for others to guess. In addition, Password Manager On Demand can be implemented with Defender to require a more secure one-time-password (OTP) authentication in conjunction with—or as a replacement to—the Q&A profile.

- Security and simplicity—Password Manager On Demand seamlessly integrates with Windows, allowing you to serve users from multiple domains, with or without trusts. Strong data encryption and secure communication are provided through support for leading security technologies such as Microsoft's CryptoAPI and SHA-256.

Monitor system activity

Password Manager On Demand provides administrators with robust logging and reporting features, making it easy to monitor system activity and correct any abnormalities.

Support identity management initiatives

Password Manager On Demand has a responsive web interface and provides password management for any system connected to Microsoft Identity Integration Server (MIIS). It also extends to non-Microsoft operating systems, such as Unix and Linux, through Authentication Services; the addition of two-factor authentication through Defender.

One Identity Hybrid Subscription

Expand the capabilities of Password Manager On Demand with the One Identity Hybrid Subscription which offers additional cloud-delivered features and services. Gain access to unlimited Starling Two-Factor Authentication to protect administrative and end-user access in Password Manager On Demand replacing Telephone Verification Add-On. A single subscription enables all One Identity solution deployments.

ISO 27001 Certified

One Identity, a Quest Company and a leading global identity security company, and its cloud infrastructure and processes have achieved ISO/IEC 27001 certification; the international standard outlining best practices for information security management systems.

About One Identity

One Identity, a Quest Software business, lets organizations implement an identity-centric security strategy, whether on-prem, in the cloud or in a hybrid environment. With our uniquely broad and integrated portfolio of identity management offerings including account management, identity governance and administration and privileged access management, organizations are empowered to reach their full potential where security is achieved by placing identities at the core of the program, enabling proper access across all user types, systems and data.
